Jakub Łabendowicz

What is cloud used for?

This is used for data storage and computing power.

How cloud works?

We send data to cloud and there they are held or counted. By front end we have access to this data.

What are the pros and cons?

Pros: access to the data everywhere, we don't need hard drive to storage data

Cons: hacker attacks, we need internet connection, free cloud has limited space

Why is the word „cloud" used?

Because we have access to data in the virtual space. We can have access everywhere.

What does front end represent?

This is all on the client side: graphic interface. It gain its name because it's the everything in front of user.

What is back end?

This is all on the server side: serwer software, databases. Back end software control and generate front end.
